

Appendix 1

Table 1A - Coding information

Coding Variable	Categories	Description (Example)
Variable ID	Unique identifier	Proced31
Author	Open text	Quaye J.
Year	Four-digit year	2014
Country of study	Open text; multiple countries permitted	England
Study Design	Empirical (full study/pilot/current report); conceptual/textual analysis	Empirical current report
Sample Group	Students (School/college/university); Teachers Other [with open text]	Students
Educational Stage	Primary; secondary; post-16; higher education; teacher education; other [with open text]	Secondary
Key Aim	Open text	To examine how social class gender ethnicity attitudes cultural capital and habitus relate to mathematical achievement in secondary schools. math learning
Methodology	Quantitative; qualitative; mixed methods; not applicable	Quantitative
Study approach	Multiple categories permitted Survey/questionnaire; interview/focus group; observation; experiment/intervention; case study; action research; Other [open text]	Survey
Gender focus	Open text	Mathematics attitudes and GCSE attainment
Sample size All	Numeric; not reported/not applicable	1106
Sample size M	Numeric; not reported/not applicable	Not reported
Sample size F	Numeric; not reported/not applicable	Not reported
Analytical Approach Quant	Descriptive; group comparisons; correlation; regression; factor analysis/PCA; ANOVA/ANCOVA; Rasch measurement/DIF; other. Multiple categories permitted	ANOVA hierarchical regression correlation
Analytical Approach Qualitative	Thematic; discourse; narrative analysis; grounded theory; descriptive; other [open text] Multiple categories permitted	Not applicable
Broad Theme	Open coding [eventually converged to the themes]	Attainment Affect Intersectionality
Intersectionality	Class/SES; ethnicity/race; language; sexuality; disability/neurodiversity; other [open text] Multiple categories permitted	Class/SES Ethnicity/Race
Key finding (For gender)	Open-text summary	Gender was analysed alongside social class and ethnicity. The principal reported differences concerned social class and habitus rather than an independent gender effect.
