

Wider mathematics education corpus (N = 568)

About this list

Supplementary list for Pampaka, M., Zhang, C., Black, L., Choudry, S., & Harris, D. (upcoming). From gender gaps to gendered identities: Four decades of gender research in BSRLM and the wider mathematics education literature (1985–2025).

Records were retrieved from Scopus in January 2026, using the chapter's gender-related search terms with the journal name restricted to titles containing “mathematic*” OR “Statistics” AND “education” OR “teach*” OR “learn*” OR “school”. The search returned 1,342 entries. After title and abstract screening against the chapter's inclusion criteria, 568 publications were retained. This corpus was used only for the topic modelling comparison reported in the chapter, and not for the thematic analysis or the citation analysis.

Bibliographic details were completed from Crossref and OpenAlex by DOI, and accepted only where the retrieved title matched the Scopus record. Records without a usable DOI were completed from Scopus directly. Titles appear as published, so capitalisation is not uniform.
